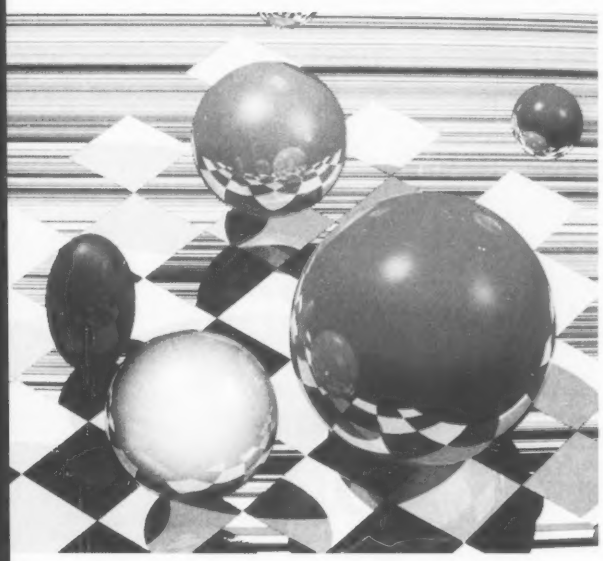
Editorial Index January 1987-December 1987



Analog Design

Analog and Digital Domains Get in Sync. SEP 87 p.24.

Analog Semicustom Arrays Pack Speed/Voltage Punch. JUN 87 p.20.

Artificial Intelligence

Imaging Joins Forces with AI. JAN 87 p.53.

AI General-Purpose Workstations Versus Tagged Machines. FEB 87 p.33.

Microcontrollers Teach Robots to Learn. MAR 87 p.38.

Silicon Compilation System Learns While Designing. APR 87 p.30.

Expert Systems for Imaging. JULY 87 p.67.

Neural Networks — Out of the Lab and Into the Real World. SEP 87 p.17.

Rule-based CAE Eliminates Design Flaws. OCT 87 p.17.

Automatic Layout

Layout Systems Square-Off With SMDs and Rip-up Routers. MAY 87 p.20.

What Makes a Good Design Automation System? SEP 87 p.26.

Board Layout Strikes a New Chord. SEP 87 p.31.

A Shortcut to Gate Array Design. OCT 87 p.67.

Battery Sources

Supercapacitors Leap Battery Power Sources in a Single Bound. JULY 87 p.26.

Benchmarking

How to Benchmark a Supercomputer. APR 87 p.63.

Boards

DEC Graphics — Board Vendors Provide Low-Cost Alternatives. JAN 87 p.35.

Imaging Boards Put Algorithms in Hardware to Up Throughput. MAR 87 p.55.

Wanted: Communications Software for Multiprocessing. MAR 87 p.72.

PC Platform Simplifies STD Bus Development. MAR 87 p.79.

Toolkit Helps Build VME-based UNIX Systems. MAR 87 p.85.

Extending the PC/AT Bus. MAR 87 p.90.

Picture Computers Blur Conventional Distinctions. MAY 87 p.22.

Low-Cost Data Acquisition Boards Pack Friendly Software. MAY 87 p.24.

The Incredible Shrinking IBM PC/AT. JUN 87 p.28.

Imaging Boards Come Into Focus. JUN 87 p.37.

The Return of the Incredible Shrinking PC. JULY 87 p.24.

Direct Connection Speeds PC Imaging. JULY 87 p.75.

New Wave Interface: A Chip for VSB. AUG 87 p.69.

DMA Controller Saves Bus Bandwidths. AUG 87 p.79.

Neural Networks — Out of the Lab and Into the Real World. SEP 87 p.17.

Board Layout Strikes a New Chord. SEP 87 p.31.

Buscon Preview — Board-Level Products Finally Grow Up. SEP 87 p.53.

PC Boards Take Modular Approach to Imaging. OCT 87 p.18.

Multibus I Goes for 32 Bits — The Pinouts of Zendex. OCT 87 p.20.

They're Here: Image Processors for Multibus II. OCT 87 p.82.

Image and Array Processors: A Marriage Made on VME. OCT 87 p.105.

Chips Bend Images at Frame Rates. NOV 87 p.16.

VME Boards Get Smarter, Faster, Intelligent, Too. NOV 87 p.19.

The Race Is On for Protocol Platforms. NOV 87 p.22.

Buses

Opening Doors to DEC Compatibility. JAN 87 p.39.

Wanted: Communications Software for Multiprocessing. MAR 87 p.72.

PC Platform Simplifies STD Bus Development. MAR 87 p.79.

Toolkit Helps Build VME-based UNIX Systems. MAR 87 p.85.

Extending the PC/AT Bus. MAR 87 p.90.

Turning to NuBus, the Mac Opens Up for Engineering. APR 87 p.21.

Direct Connection Speeds PC Imaging. JULY 87 p.75.

New Wave Interface: A Chip for VSB. AUG 87 p.69.

DMA Controller Saves Bus Bandwidths. AUG 87 p.79.

Buscon Preview — Board-Level Products Finally Grow Up. SEP 87 p.53.

Multibus I Goes for 32 Bits — The Pinouts of Zendex. OCT 87 p.20.

Input/Output Issues Within Multibus II. OCT 87 p.55.

Design Tool Debugs Bi Bus. NOV 87 p.99.

Real Time Calls the VMEbus. DEC 87 p.26

Cache Design

System Designs "Cache In" on Fast CMOS SRAMS. JAN 87 p.19.

Keeping Cache Coherency in Multimaster Systems. JUN 87 p.51.

CAE/CAD

Workstation Gets Guts and Graphics. JAN 87 p.22.

Turning to NuBus, the Mac Opens Up for Engineering. APR 87 p.21.

LAN Standards Make Headway in CAE/CAD. APR 87 p.82.

Layout Systems Square-Off with SMDs and Rip-up Routers. MAY 87 p.20.

386 Systems Set Sights on Desktop Design. JUN 87 p.72.

Object-Oriented Architectures — An Intelligent Approach to CAE. JUN 87 p.84.

Integrating CAE/CAD: One Company's Story. JUN 87 p.91.

Latest EDIF Version Marks a Milestone for CAE/CAD. JUN 87 p.96.

10-MIPS Workstation Boasts Scalable Architecture. JULY 87 p.22.

PLDs and 68020 Provide Launchpad for 68030 Designs. AUG 87 p.45.

Analog and Digital Domains Get in Sync. SEP 87 p.24.

What Makes a Good Design Automation System? SEP 87 p.26.

Rule-based CAE Eliminates Design Flaws. OCT 87 p.17.

A Shortcut to Gate Array Design. OCT 87 p.67.

Design Tool Debugs BI Bus. NOV 87 p.99.

VHDL and EDIF Standardize CAE/CAD. DEC 87 p.28

Linear Semicustom Shifts into High Gear. DEC 87 p.63.

CASE

CASE Capabilities Grow. JUN 87 p.99.

CASExpo 1987. OCT 87 p.31.

CMOS

System Designs "Cache In" on Fast CMOS SRAMS. JAN 87 p.19.

Advanced CMOS Logic Wars Escalate over Ground Bounce. AUG 87 p.53.

Rad-hard CMOS/SOS ICs Save Satellite Systems from Solar Storms. NOV 87 p.26.

Mastering the BiCMOS Mix. NOV 87 p.47.

Communications

Dense Chips Ease Networking. JAN 87 p.44.

GaAs Cells Simplify High-Speed Communications. FEB 87 p.57.

LAN Standards Make Headway in CAE/CAD. APR 87 p.82.

Ethernet/Cheapernet Chips: The Power and the Process. APR 87 p.87.

Chip Houses Swarm to Embrace 100-Mbit/sec LAN. MAY 87 p.17.

Fast Modem ICs Choose V.22bis Mold. JUN 87 p.24.

Wanted: Communications Software for Multiprocessing. JUN 87 p.72.

Functionality, not Performance, Determines MAP/TOP 3.0 Impact. AUG 87 p.20.

Interface ICs Deal With a Faster World. SEP 87 p.61.

Chips Find Varied Ways to Handle ISDN. OCT 87 p.26.

The Race Is On for Protocol Platforms. NOV 87 p.22.

Compilers

Parallel Processing Makes Compiler Advances. MAR 87 p.61.

Silicon Compilation System Learns While Designing. APR 87 p.30.

Controllers

Microcontrollers Teach Robots to Learn. MAR 87 p.38.

Coprocessors

Coprocessor Pushes 386 PC Speeds. MAR 87 p.22.

Imaging Boards Put Algorithms in Hardware to Up Throughput. MAR 87 p.55.

Neural Networks-Out of the Lab and Into the Real World. SEP 87 p.17.

Input/Output Issues Within Multibus II. OCT 87 p.55.

Data Acquisition

Low-Cost Data Acquisition Boards Pack Friendly Software. MAY 87 p.24.

Databases

Distributed Database Maps Out Graphics. JAN 87 p.24.

Digital Signal Processors

Digital Filtering Made Easy. MAY 87 p.45.

Disk Drive Technology

Standard Proposal Opens Can of WORMs. JAN 87 p.26.

Floppy Disks Break 10-Mbyte Barrier. JAN 87 p.28.

Optical Disks Get Drafted. MAY 87 p.52.

Optical Technology: What's Mature and What's on the Horizon. SEP 87 p.41.

Adding Drives To Increase Reliability. DEC 87 p.22.

DMA

DMA Controller Saves Bus Bandwidths. AUG 87 p.79.

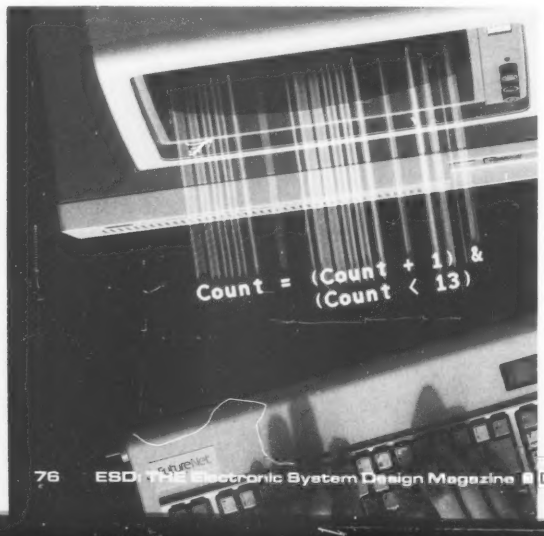
DOS

DOS, UNIX and the Missing Link. FEB 87 p.23.

Running DOS and UNIX on a Multibus II Supermicro. MAY 87 p.31.

DRAMs

ISSCC-4-Mbit DRAMs and 25-nsec SRAMs Debut. APR 87 p.73.



PC Controller Produces Picture-Perfect Images. MAY 87 p.85.

ECL

ECL Arrays: More Vendors, More Gates, More Speed. JAN 87 p.21.

Si-ECL and GaAs SRAMs Fuel High-Speed Arithmetic and Microcode Engines. FEB 87 p.20.

ECL Arrays Sprint to the Forefront. APR 87 p.35.

EEPROMs

EEPROM Programs in a Flash. APR 87 p.78.

Emulation

Machine Acts Like a PC, Emulates DEC Terminals. AUG 87 p.24.

Erasable optical media

Optical Technology: What's Mature and What's on the Horizon. SEP 87 p.41.

FDDI

Chip Houses Swarm to Embrace 100-Mbit/sec LAN. MAY 87 p.17.

FDDI Chips: The Dawn of a New LAN. OCT 87 p.37.

Fiber Optics

GaAs Cells Simplify High-Speed Communications. FEB 87 p.57.

FDDI Chips: The Dawn of a New LAN. OCT 87 p.37.

FIFOs

FIFOs and MACs Make FIR Filters Fast. JUN 87 p.57.

Filters

Digital Filtering Made Easy. MAY 87 p.45.

FIFOs and MACs Make FIR Filters Fast. JUN 87 p.57.

FFT-Specific Chips Crunch Frequency Domain Data. DEC 87 p.20.

GaAs ICs

Si-ECL and GaAs SRAMs Fuel High-Speed Arithmetic and Microcode Engines. FEB 87 p.20.

GaAs Cells Simplify High-Speed Communications. FEB 87 p.57.

Gates and Gate Arrays

ECL Arrays: More Vendors, More Gates, More Speed. JAN 87 p.21.

Scan Design Simplifies IC Testing. MAY 87 p.69.

Machine Acts Like a PC, Emulates DEC Terminals. AUG 87 p.24.

Scalable Processor Gets Products. SEP 87 p.22.

A Shortcut to Gate Array Design. OCT 87 p.67.

Chip Boasts 9000 Gates, Rivals Gate Arrays. NOV 87 p.30.

Graphics

Workstation Gets Guts and Graphics. JAN 87 p.22.

Distributed Database Maps Out Graphics. JAN 87 p.24.

DEC Graphics — Board Vendors Provide Low-Cost Alternatives. JAN 87 p.35.

Graphics and DSP ICs Speed PC Imaging. JAN 87 p.49.

PC Graphics Hardware Dictates Standards at High End. FEB 87 p.37.

Video Hybrid Digitizes Images at RS-170 Rates. MAR 87 p.50.

Imaging Boards Put Algorithms in Hardware to Up Throughput. MAR 87 p.55.

Ultrahigh-Res Monitors Compete in Demonstration Derbies. APR 87 p.26.

Terminals, PCs Get That 3D Feeling. APR 87 p.29.

Picture Computers Blur Conventional Distinctions. MAY 87 p.22.

PC Controller Produces Picture-Perfect Images. MAY 87 p.85.

Off-the-Shelf and Custom Hardware Team Up to Handle Mail. JULY 87 p.82.

Raster Displays Hit 3000-Line Resolution. JULY 87 p.91.

Machine Acts Like a PC, Emulates DEC Terminals. AUG 87 p.24.

Here Come the IBM Look-Alike Add-ons. SEP 87 p.18.

ACRTC Plus Peripheral ICs Make PC Graphics. SEP 87 p.71.

Visualization Ties Imaging and Graphics Together. SEP 87 p.79.

ICs

System Designs "Cache In" on Fast CMOS SRAMS. JAN 87 p.19.

ECL Arrays: More Vendors, More Gates, More Speed. JAN 87 p.21.

Workstation Gets Guts and Graphics. JAN 87 p.22.

Dense Chips Ease Networking. JAN 87 p.44.

Graphics and DSP ICs Speed PC Imaging. JAN 87 p.49.

Floating Point — Where Speed Is All. FEB 87 p.19.

Si-ECL and GaAs SRAMs Fuel High-Speed Arithmetic and Microcode Engines. FEB 87 p.20.

Application-Specific PLDs Fill Big Niche. FEB 87 p.28.

PC Graphics Hardware Dictates Standards at High End. FEB 87 p.37.

Coprocessor Pushes 386 PC Speeds. MAR 87 p.22.

Pipelined Processor Pushes Performance. MAR 87 p.30.

ISSCC-4-Mbit DRAMs and 25-nsec SRAMs Debut. APR 87 p.73.

Ethernet/Cheapernet Chips: The Power and the Process. APR 87 p.87.

Chip Houses Swarm to Embrace 100-Mbit/sec LAN. MAY 87 p.17.

Warhorse Z80 Gets Upgrade, Software Support. MAY 87 p.19.

Digital Filtering Made Easy. MAY 87 p.45.

ASICs Target MIL-Spec Bottlenecks. MAY 87 p.56.

Scan Design Simplifies IC Testing. MAY 87 p.69.

Analog Semicustom Arrays Pack Speed/Voltage Punch. JUN 87 p.20.

Fast Modem ICs Choose V.22bis Mold. JUN 87 p.24.

Keeping Cache Coherency in Multimaster Systems. JUN 87 p.51.

FIFOs and MACs Make FIR Filters Fast. JUN 87 p.57.

The Return of the Incredible Shrinking PC. JULY 87 p.24.

The Quest for a VME Interface Chip. JULY 87 p.31.

Chip Set Performs Fast Imaging. AUG 87 p.17.

Transforming Digital Images in Real Time. AUG 87 p.27.

New Wave Interface: A Chip for VSB. AUG 87 p.69.

SRAMs Link Hardware and Software. SEP 87 p.20.

Buscon Preview — Board-Level Products Finally Grow Up. SEP 87 p.53.

Interface ICs Deal With a Faster World. SEP 87 p.61.

ACRTC Plus Peripheral ICs Make PC Graphics. SEP 87 p.71.

Chips Find Varied Ways to Handle ISDN. OCT 87 p.26.

Chips Bend Images at Frame Rates. NOV 87 p.16.

Rad-hard CMOS/SOS ICs Save Satellite Systems from Solar Storms. NOV 87 p.26.

Chip Boasts 9000 Gates, Rivals Gate Arrays. NOV 87 p.30.

Superconductor Session Warms Up to Wescon. NOV 87 p.41.

Mastering the BiCMOS Mix. NOV 87 p.47.

Disk Interfacing Gets Smart. NOV 87 p.77.

A Semistandard Way to Differentiate Designs. NOV 87 p.89.

FFT-Specific Chips Crunch Frequency Domain Data. DEC 87 p.20.

Chip Set Combo Transforms Images at Low Cost. DEC 87 p.54.

Imaging

Graphics and DSP ICs Speed PC Imaging. JAN 87 p.49.

Imaging Joins Forces with AI. JAN 87 p.53.

Convolution Hardware Accelerates Imaging Tasks. JAN 87 p.58.

Squeeze Your Image on the PC. FEB 87 p.66.

Array Processor Spurs Faster Imaging. FEB 87 p.70.

Transform-based Processing: How Much Precision is Needed? FEB 87 p. 76.

A Versatile Architecture for Imaging. FEB 87 p.81.

Adding a New Dimension to Imaging. MAR 87 p.19.

Video Hybrid Digitizes Images at RS-170 Rates. MAR 87 p.50.
Imaging Boards Put Algorithms in Hardware to Up Throughput. MAR 87 p.55.
Applications Determine Architectures for Imaging. APR 87 p.51.
Video Codecs Send Images Over the Phone. APR 87 p.93.
Picture Computers Blur Conventional Distinctions. MAY 87 p.22.
Imaging — The View from Above. MAY 87 p.62.
Gray-Level Processing in Machine Vision. MAY 87 p.79.
A C Controller Produces Picture-Perfect Images. MAY 87 p.85.
PC Plays Host to Clever Imaging Boards. JUN 87 p.22.
Imaging Boards Come Into Focus. JUN 87 p.37.
Expert Systems for Imaging. JULY 87 p.67.
Direct Connection Speeds PC Imaging. JULY 87 p.75.
Off-the-Shelf and Custom Hardware Team Up to Handle Mail. JULY 87 p.82.
Raster Displays Hit 3000-Line Resolution. JULY 87 p.91.
Recognizing Objects Using Curvature. JULY 87 p.96.
Chip Set Performs Fast Imaging. AUG 87 p.17.
Transforming Digital Images in Real Time. AUG 87 p.27.
Finding Circles with Sobel Algorithms. AUG 87 p.35.
ACRTC Plus Peripheral ICs Make PC Graphics. SEP 87 p.71.
Visualization Ties Imaging and Graphics Together. SEP 87 p.79.
Graphics at 820 MFLOPS. SEP 87 p.87.
Where Are the Color Image Computers? OCT 87 p.81.
They're Here: Image Processors for Multibus II. OCT 87 p.82.
Color Cell Compression Shrinks NTSC Images. OCT 87 p.91.
Programmable Logic Betters the Odds for Bet-Slip Readers. OCT 87 p.99.
Image and Array Processors: A Marriage Made on VME. OCT 87 p.105.
Chips Bend Images at Frame Rates. NOV 87 p.16.
VME Boards Warp Images at High Speeds. NOV 87 p.57.
Morphology Changes the Shape of Machine Vision. NOV 87 p.67.
What's New—An Electronic Imaging Review. DEC 87 p.17.
Interactive Image Processing Using X Windows. DEC 87 p.32.
Estimating Kernels from Amplitude Spectra. DEC 87 p.35.
Image Restoration Techniques. DEC 87 p.39.

Interface ICs

The Quest for a VME Interface Chip. JULY 87 p.31.
New Wave Interface: A Chip for VSB. AUG 87 p.69.

Buscon Preview — Board-Level Products Finally Grow Up. SEP 87 p.53.
Interface ICs Deal With a Faster World. SEP 87 p.61.
Input/Output Issues Within Multibus II. OCT 87 p.55.
VME Boards Get Smarter, Faster, Intelligent, Too. NOV 87 p.19.

ISDN

Chips Find Varied Ways to Handle ISDN. OCT 87 p.26.

Local Area Networks (LANs)

Dense Chips Ease Networking. JAN 87 p.44.
Optimizing the Software Development Environment. MAR 87 p.45.
LAN Standards Make Headway in CAE/CAD. APR 87 p.82.
Ethernet/Cheapernet Chips: The Power and the Process. APR 87 p.87.
Chip Houses Swarm to Embrace 100-Mbit/sec LAN. MAY 87 p.17.
Functionality, not Performance, Determines MAP/TOP 3.0 Impact. AUG 87 p.20.
FDDI Chips: The Dawn of a New LAN. OCT 87 p.37.
The Race Is On for Protocol Platforms. NOV 87 p.22.

Machine Vision

Gray-Level Processing in Machine Vision. MAY 87 p.79.
Off-the-Shelf and Custom Hardware Team Up to Handle Mail. JULY 87 p.82.
Recognizing Objects Using Curvature. JULY 87 p.96.
Morphology Changes the Shape of Machine Vision. NOV 87 p.67.

Memory

System Designs "Cache In" on Fast CMOS SRAMS. JAN 87 p.19.
Standard Proposal Opens Can of WORMs. JAN 87 p.26.
Address Pipelining, Fast Memories Allow Nonstop 386 Designs. FEB 87 p.26.
Advanced Bubble Memories Keep Ruggedized Systems Afloat. MAR 87 p.21.
Keeping Cache Coherency in Multimaster Systems. JUN 87 p.51.
DMA Controller Saves Bus Bandwidths. AUG 87 p.79.

Microcode

Si-ECL and GaAs SRAMs Fuel High-Speed Arithmetic and Microcode Engines. FEB 87 p.20.
SRAMs Link Hardware and Software. SEP 87 p.20.

Microprocessors

Workstation Gets Guts and Graphics. JAN 87 p.22.
Turning to NuBus, the Mac Opens Up for Engineering. APR 87 p.21.
Warhorse Z80 Gets Upgrade, Software Support. MAY 87 p.19.
386 Systems Set Sights on Desktop Design. JUN 87 p.72.
Architectural Advances Yield True 8-Bit, Single-Chip Computers. JULY 87 p.57.
PLDs and 68020 Provide Launchpad for 68030 Designs. AUG 87 p.45.

MicroVAX

Making the MicroVAX a Real-Time Machine. JAN 87 p.32.
MicroVAX Attacks Real-Time Data I/O. MAY 87 p.36.

Military Applications

Optical Disks Get Drafted. MAY 87 p.52.
ASICs Target MIL-Spec Bottlenecks. MAY 87 p.56.
Imaging — The View from Above. MAY 87 p.62.

Modeling

Bringing Solids Modeling to the PC. APR 87 p.57.

Modems

Fast Modem ICs Choose V.22bis Mold. JUN 87 p.24.

Monitors

Ultrahigh-Res Monitors Compete in Demonstration Derbies. APR 87 p.26.

Raster Displays Hit 3000-Line Resolution. JULY 87 p.91.

PC Controller Produces Picture-Perfect Images. May 87 p.85.

Multibus

Running DOS and UNIX on a Multibus II Supermicro. MAY 87 p.31.

Multibus I Goes for 32 Bits — The Pinouts of Zendex. OCT 87 p.20.

Input/Output Issues Within Multibus II. OCT 87 p.55.

Multiprocessing

Wanted: Communications Software for Multiprocessing. MAR 87 p.72.

Keeping Cache Coherency in Multimaster Systems. JUN 87 p.51.

Neural Networks

Neural Networks — Out of the Lab and Into the Real World. SEP 87 p.17.

NuBus

Turning to NuBus, the Mac Opens Up for Engineering. APR 87 p.21.

Operating Systems

DOS, UNIX and the Missing Link. FEB 87 p.23.

Toolkit Helps Build VME-based UNIX Systems. MAR 87 p.85.

OS/2

Beating the OS/2 Blues. AUG 87 p.22.

Packaging

It's Time for Better High-Density Packaging. OCT 87 p.49.

Parallel Processing

Parallel Processing Makes Compiler Advances. MAR 87 p.61.

Parallel Processor Gets Data Intensive. JUN 87 p.17.

PC/AT

Extending the PC/AT Bus. MAR 87 p.90.

The Incredible Shrinking IBM PC/AT. JUN 87 p.28.

PCs

Graphics and DSP ICs Speed PC Imaging. JAN 87 p.49.

PC Graphics Hardware Dictates Standards at High End. FEB 87 p.37.

Squeeze Your Image on the PC. FEB 87 p.66.

PC Platform Simplifies STD Bus Development. MAR 87 p.79.

Terminals, PCs Get That 3D Feeling. APR 87 p.29.

Bringing Solids Modeling to the PC. APR 87 p.57.

Next Generation PCs Kick-off "Year of Confusion". MAY 87 p.26.

PC Controller Produces Picture-Perfect Images. MAY 87 p.85.

PC Plays Host to Clever Imaging Boards. JUN 87 p.22.

The Incredible Shrinking IBM PC/AT. JUN 87 p.28.

The Return of the Incredible Shrinking PC. JULY 87 p.24.

Direct Connection Speeds PC Imaging. JULY 87 p.75.

Machine Acts Like a PC, Emulates DEC Terminals. AUG 87 p.24.

Neural Networks — Out of the Lab and Into the Real World. SEP 87 p.17.

Here Come the IBM Look-Alike Add-ons. SEP 87 p.18.

ACRTC Plus Peripheral ICs Make PC Graphics. SEP 87 p.71.

PC Boards Take Modular Approach to Imaging. OCT 87 p.18.

Peripherals

Standard Proposal Opens Can of WORMs. JAN 87 p.26.

Floppy Disks Break 10-Mbyte Barrier. JAN 87 p.28.

QIC-300 Matches HI/TC for Capacity and Throughput. JUN 87 p.19.

Vertical Recording Makes a Stand in High-Capacity Drive Segment. JULY 87 p.19.

Disk Interfacing Gets Smart. NOV 87 p.77.

Pipelining

Address Pipelining, Fast Memories Allow Nonstop 386 Designs. FEB 87 p.26.

Pipelined Processor Pushes Performance. MAR 87 p.30.

Graphics at 820 MFLOPS. SEP 87 p.87.

PLDs

Application-Specific PLDs Fill Big Niche. FEB 87 p.28.

Reports from the PLD Front. FEB 87 p.46.

A Glance at the PLD Industry. MAR 87 p.24.

Advanced Development Tools Automate PLD Design. JULY 87 p.40.

PLDs and 68020 Provide Launchpad for 68030 Designs. AUG 87 p.45.

Input/Output Issues Within Multibus II. OCT 87 p.55.

Programmable Logic Betters the Odds for Bet-Slip Readers. OCT 87 p.99.

Processors

Graphics and DSP ICs Speed PC Imaging. JAN 87 p.49.

DOS, UNIX and the Missing Link. FEB 87 p.23.

Address Pipelining, Fast Memories Allow Nonstop 386 Designs. FEB 87 p.26.

Array Processor Spurs Faster Imaging. FEB 87 p.70.

Transform-Based Processing: How Much Precision is Needed? FEB 87 p.76.

Pipelined Processor Pushes Performance. MAR 87 p.30.

Imaging Boards Come Into Focus. JUN 87 p.37.

VME Boards Get Smarter, Faster, Intelligent, Too. NOV 87 p.19.

Remote sensing

Imaging — The View from Above. MAY 87 p.62.

RISC

10-MIPS RISC Workstation Boasts Scalable Architecture. JULY 87 p.

Scalable Processor Gets Products. SEP 87 p.22.

General-Purpose and Symbolic Processors Scramble for Dominance. OCT 87 p.22.

Robotics

Finding Circles with Sobel Algorithms. AUG 87 p.35.

Semicustom Arrays

GaAs Cells Simplify High-Speed Communications. FEB 87 p.57.

Analog Semicustom Arrays Pack Speed/Voltage Punch. JUN 87 p.20.

Simulation

Digital Simulators Encroach on Breadboard Domain. JAN 87 p.64.

Analog and Digital Domains Get in Sync. SEP 87 p.24.

SMDs

Layout Systems Square-Off With SMDs and Rip-up Routers. MAY 87 p.20.

Software

Distributed Database Maps Out Graphics. JAN 87 p.24.

Making the MicroVAX a Real-Time Machine. JAN 87 p.32.

DOS, UNIX and the Missing Link. FEB 87 p.23.

Optimizing the Software Development Environment. MAR 87 p.45.

Wanted: Communications Software for Multiprocessing. MAR 87 p.72.

Warhorse Z80 Gets Upgrade, Software Support. MAY 87 p.19.

Low-Cost Data Acquisition Boards Pack Friendly Software. MAY 87 p.24.

Running DOS and UNIX on a Multibus II Supermicro. MAY 87 p.31.

MicroVAX Attacks Real-Time Data I/O. MAY 87 p.36.

Taming the Windows Development Beast. JULY 87 p.21.

Expert Systems for Imaging. JULY 87 p.67.

Functionality, not Performance, Determines MAP/TOP 3.0 Impact. AUG 87 p.20.

Beating the OS/2 Blues. AUG 87 p.22.

What Makes a Good Design Automation System? SEP 87 p.26.

CASExpo 1987. OCT 87 p.31.

Programming with Pictures. OCT 87 p.34.

Real Time Calls the VMEbus. DEC 87 p.26.

VHDL and EDIF Standardize CAE/CAD. DEC 87 p.28.

Sleight of Hand Makes MS-DOS Multitasking. DEC 87 p.47.

SOS

Rad-hard CMOS/SOS ICs Save Satellite Systems from Solar Storms. NOV 87 p.26.

SRAMs

System Designs "Cache In" on Fast CMOS SRAMS. JAN 87 p.19.

Si-ECL and GaAs SRAMs Fuel High-Speed Arithmetic and Microcode Engines. FEB 87 p.20.

ISSCC-4-Mbit DRAMs and 25-nsec SRAMs Debut. APR 87 p.73.

SRAMs Link Hardware and Software. SEP 87 p.20.

STD Bus

PC Platform Simplifies STD Bus Development. MAR 87 p.79.

Storage

Standard Proposal Opens Can of WORMs. JAN 87 p.26.

QIC-300 Matches HI/TC for Capacity and Throughput. JUN 87 p.19.

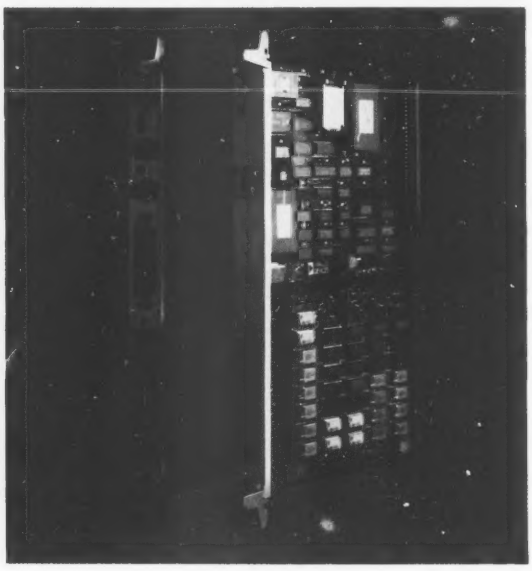
Vertical Recording Makes a Stand in High-Capacity Drive Segment. JULY 87 p.19.

Board Layout Strikes a New Chord. SEP 87 p.31.

Disk Interfacing Gets Smart. NOV 87 p.77.

Supercapacitors

Supercapacitors Leap Battery Power Sources in a Single Bound. JULY 87 p.26.



Supercomputers

How to Benchmark a Supercomputer. APR 87 p.63.

Superconductors

Superconductor Session Warms Up to Wescon. NOV 87 p.41.

Systems

Workstation Gets Guts and Graphics. JAN 87 p.22.

MicroVAX Attacks Real-Time Data I/O. MAY 87 p.36.

386 Systems Set Sights on Desktop Design. JUN 87 p.72.

System Software

Making the MicroVAX a Real-Time Machine. JAN 87 p.32.

MicroVAX Attacks Real-Time Data I/O. MAY 87 p.36.

UNIX Tweaked for Real-Time Applications. JUN 87 p.60.

Transforming Digital Images in Real Time. AUG 87 p.27.

Terminals

Terminals, PCs Get That 3D Feeling. APR 87 p.29.

Machine Acts Like a PC, Emulates DEC Terminals. AUG 87 p.24.

3D

Adding a New Dimension to Imaging. MAR 87 p.19.

Terminals, PCs Get That 3D Feeling. APR 87 p.29.

Transforms

Transform-Based Processing: How Much Precision Is Needed? FEB 87 p.76.

VME Boards Warp Images at High Speeds. NOV 87 p.57.

UNIX

DOS, UNIX and the Missing Link. FEB 87 p.23.

Toolkit Helps Build VME-based UNIX Systems. MAR 87 p.85.

Running DOS and UNIX on a Multibus II Supermicro. MAY 87 p.31.

UNIX Tweaked for Real-Time Applications. JUN 87 p. 60.

Video

Video Hybrid Digitizes Images at RS-170 Rates. MAR 87 p.50.

Video Codecs Send Images Over the Phone. APR 87 p.93.

Color Cell Compression Shrinks NTSC Images. OCT 87 p.91.

Chips Bend Images at Frame Rates. NOV 87 p.16.

Chip Set Combo Transforms Images at Low Cost. DEC 87 p.54.

VME

The Return of the Incredible Shrinking PC. JULY 87 p.24.

The Quest for a VME Interface Chip. JULY 87 p.31.

VME Debugging: A Test-Tool Picnic. AUG 87 p.85.

Finding Circles with Sobel Algorithms. AUG 87 p.35.

Image and Array Processors: A Marriage Made on VME. OCT 87 p.105.

VME Boards Get Smarter, Faster, Intelligent, Too. NOV 87 p.19.

Real Time Calls the VMEbus. DEC 87 p.26.

Workstations

Workstation Gets Guts and Graphics. JAN 87 p.22.

AI General-Purpose Workstations Versus Tagged Machines. FEB 87 p.33.

10-MIPS RISC Workstation Boasts Scalable Architecture. JULY 87 p22.

Scalable Processor Gets Products. SEP 87 p.22.

WORMs

Standard Proposal Opens Can of WORMs. JAN 87 p.26.

Optical Technology: What's Mature and What's on the Horizon. SEP 87 p.41.
